MINIMUM ESSENTIAL METADATA

(MEM)

Chuck Chipman, JS J6 DSD (GTRI)

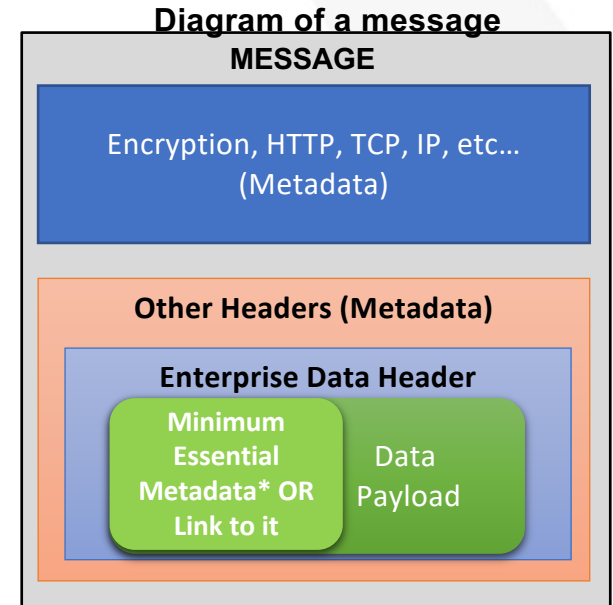

DOD MEM

Key Considerations:

- “Minimum Essential Metadata (MEM)” is a limited set of metadata necessary to support the ‘must have’ functions for any data across *DoD, joint, interagency, and coalition* at the time of ‘creation’ that will be exchanged. The ‘must have’ functions are:

- Access	- Audit (<i>multiple types</i>)
- Correlation	- Records Management
- Discovery	- Protection

- Applies to any DoD data that is exchanged (excludes raw, unprocessed data)
- Applies at the time of creation, as close as is technically feasible to the time of creation for some data assets (e.g. sensor data, etc.), or when DoD acquired the data asset
- MEM is not dependent upon how long a piece of data or information lives (i.e. one day or 20 years)

* Plus any additional function or mission specific metadata applied to the payload beyond the MEM

Any organization or community can add more than the minimum essential at the time of creation not less

MEM REQUIREMENTS SOURCES

DRAFT MINIMUM ESSENTIAL METADATA

Resource Description:

- **Unique Identifier** - *an unambiguous (unique) reference to the resource (PO#3, NARA, & NATO)*
- **Legal Authority** - *The particular documented legal basis for mission activities associated with the creation, retention and use of a resource. (PO#3)*
- **Creator**– *An organizational entity primarily responsible for generating the resource. For DoD, creator is synonymous with author, originator, and collector. (PO#3, NARA, & NATO)*
- **Office of Record** - *Organizational element that is legally responsible for the data asset (e.g. records management, classification, eDiscovery, FOIA search). (Modified from NARA)*
- **Date & Time Created** – *Date and time on which the data resource was created to include when a data resource came under government control (i.e. acquisition of third party data, etc.) (modified from NATO)*
- **Description (Subject)** - *A brief account of the resource. (PO#3, NARA, & NATO)*
- **Format** - *Information about the file format, physical medium, or dimensions of the resource. (NATO)*

Safe Guarding & Sharing – (Entitlements Management)

- **Security Classification** - *A single indicator identifying the highest level of classification contained within a resource (NARA, & NATO)*
- **Disclosure & Releasability** - *Information pertaining to countries, organizations, or communities approved to receive the resource (PO#3, NARA, & NATO)*
- **Handling Restrictions** - *Limitations not related to classification or releasability, such as Controlled Unclassified Information designations. (PO#3 & NARA)*

Note: Using the PO#3 terminology with some exceptions (Office of Record, Date & Time Created, and Format)

- Projected 5.2 Release Timelines
 - Alpha, May
 - Beta, Jul/Aug
 - Release Candidate 1, Sep/Oct

QUESTIONS

NIEM AND METADATA

- Within NIEM, metadata is defined as “data about data”; that is, information that is not descriptive of objects and their relationships, but is descriptive of the data itself
- Characteristics of metadata include:
 - Metadata objects may appear outside the data they describe. They are applied by reference via the metadata attribute
 - Metadata objects may be applied to multiple objects within the same document
 - Each metadata attribute may hold references to multiple metadata objects, which enables messages to apply multiple metadata properties to objects and relationships
- NIEM supports metadata through use of metadata properties and types that are derived from structures:MetadataType
- Examples of NIEM metadata include nc:MetadataType and CUI marking metadata types; NIEM also supports use of IC-ISM

OASIS OPEN
Transition Activities

Continue adding NIEM Domains Content through regular NIEM Releases...

Briefed DHS Biometrics Executive Committee (CBP, ICE, TSA, USCG, DHS, DOJ (OBIM). Biometrics Domain.

Assisting NIEM PMO in working through several activities. OASIS-NIM FAQ, Charter

Reevaluating the IP Domain with the DHS CISA office IP taxonomy is being architected.

Continue exploring SLTT through the tiger team. Next meeting is April 18th

IHS Domain organization known as Employment and Social Development Canada (ESDC) Preparing to present at International Social Security Association (ISSA), in Estonia.

NBAC 2022 PRIORITIES

- Continue Maturing
 - IP Domain, IHS Domain, L&D Domain ...
 - Action Tracker, Manage releases, Advance NIEM Adoption, Support Domain Growth, Improve NIEM implementation,
 - Tiger teams, NIEM Community Governance, 2022 Work Plan
 - NBAC OASIS Transition
 - Update NBAC Charter, SOP, DSA - OASIS compliant
- Leveraging Tiger Teams
 - Internationalization (continue discussion with NTAC and how best to approach internationalization)
 - USA State, Local, & Tribal (Onboarding Canada SLTT)
- Ensure NIEM Data Model Maturation

NTAC STATUS

CURRENT ACTIVITIES

- Common Model Format (CMF)
 - Multiple technology support (XML, JSON, RDF, ...)
 - Provide open-source CMF tools for developers
- NIEM 6 Architecture improvements
- These are interrelated topics
 - Changes to one impact the other and vice versa
- Face-2-Face coming up
 - Week of 15 August

NIEM COMMON MODEL FORMAT (CMF)

- Goal: Technology independence for data models
 - Before: Data models are represented as XML Schema documents
 - After: Data models are represented in the *Common Model Format (CMF)*
 - Unshackling NIEM from XML Schema's eccentricities
- Benefits
 - The NIEM model (core & domains) can be used by developers working with many data formats (JSON, RDF, etc.), and not just XML
 - A single message model can support many message formats
 - A NIEM message in one format can be translated into some other formats (XML to JSON, JSON to XML, etc.)

CMF STATUS & 2022 WORK PLAN

- Refine the metamodel / CMF as tool development proceeds
 - Iterative, one informs the other and vice versa
 - **Metadata is causing a major rethink**
 - **Potential new technologies like RDF* or JSON-LD***
- Developing free, open-source metamodel / CMF tools
- Working now:
 - Metamodel / CMF version 2 or so
 - Convert NIEM-based XML schema to CMF
 - Convert CMF to NIEM XML schema documents
- Planned for 2022:
 - Convert CMF to ontology formalism (RDFS+OWL)
 - Convert CMF to JSON Schema
 - Convert CMF to UML diagrams (XMI)
 - Convert UML diagrams to CMF (limited by lack of XMI standardization)
- Other technologies, eventually: Google Protocol Buffer, Apache Avro, YAML, etc.

NIEM 6 ARCHITECTURE

- Major architectural changes happen only with a major release
- Next major release is NIEM 6.0 in 2023 (if so directed)
- Several significant changes in the works:
 - Replace XML Schema with CMF as the NIEM model representation
 - **Simplify or replace metadata attributes**
 - Handle ordered, repeated properties (replace @sequenceID)
 - Currently 14 other proposals
- For each proposal: consider, test, consult NBAC
- Looking good for a NIEM 6.0 release

NIEM MESSAGE SPECIFICATIONS

- Currently on hiatus currently, as CMF and related NIEM 6 architecture issues are swamping our bandwidth
- Simplified next generation of IEPDs
 - Convention over configuration
 - Simple cases made simple, while complex cases still supported
- *Guidance for NIEM Message Specifications* in preparation now
 - A “how-to” guide, not a technical specification
 - Formal specification to follow, if needed

NIEM TRAINING UPDATE

2022-05-11

TRAINING PROGRAM

- Monthly live training continues
 - May is sold out
- Recorded the full training
 - Will be available at some point for hybrid training
 - Video + live instructor on-call for questions
 - Will also be available as standalone online training
- Fireside Chat
 - Thursday at 1300-1500 (tomorrow)
 - For folks who have taken the course to ask follow-up questions
 - There will be no actual fire
